

SOUTH PRODUCTION NOTES

July 2, 2016

11-7 Shift Notes

BASF EMPLOYEES

215 Last Recordable

282 Last Lost time

Title V Notes: Trimer – Inlet was plugged again and cleaned out on day shift. ORP needs to be watched as we start up #4 calciner. Keep an eye on the stack.

F1 – back up and running. Sheaves and belts have been ordered in case we have any more issues. We need to drain half a tote from F1 per day on 2nd shift to get rid of Moly. Need a sample of the sump taken on afternoon shift everyday and the sump pumped out.

CTO – is running.

Please keep the B31 sump locked out. We need to watch sump closely and sample every shift so we don't overflow. Had issues with it filling quickly during pfaudler cooling.

There is an intermittent issues with one of the NOx/CO sensors that keeps tripping out the system - WOW. Please keep an eye on it. Eliott was contacted today to get them fixed.

#1 MED / AI 5645:

Continue making batches.

We are ok to build up feed. Bodmann is going to increase the rate on the calciner and we will need to run most shifts. Grease the end seals each shift.

#1 RC / AI 5645 next:

Continue feeding. Contacted John about good material in the fines and that we already have 3500 lbs of fines.

Keep feed rate at 450 to 500. Watch suction, we are now running #4 calciner.

This product has a lot of Nitric in it, so we need to keep a close eye on the trimer while running #1 and #4 together.

#2 MED line / Styrene:

Continue making batches. We have had issues with the discharge valve blinding over, may need to scrap out. It was decided to keep running with current vibration issue, keep an eye on the gearbox and discharge end bearings. We will make 35 batches with current blank configuration then Justin will reevaluate.

The replacement pallet jack is in shipping and we can bring it up to dept. We need to clean the pallet jack we borrowed from LIB and have Bob Urig inspect it.

When we double stack the material put an extra pallet in between so people don't accidentally fork the top of the bags. Green drums are the only drums to have dry ice put into them.

#2 RC / Styrene:

Out of feed.

Feed bags in batch order.

#3 MED line / D-1715:

Continue making batches (we will need about 15 total for the order). **Watch getting too far ahead of calciner due to small order size.**

Make sure we are greasing end seals once per shift when running.

#3 RC / D-1715 next:

Once D0717 Flush material has ran through we can feed 2 new drums of alumina sand through calciner and spiral at temp. After sand runs through we need to change screens then start feeding D1715.

Make sure to seal pouches on labels (we have had a few fall out).

#4 RC / D-0226 8x14:

We need to change the screens and setup the discharge end so we can start feeding 8x14 material on 3rd shift. Keep an eye on the trimer for yellow stack and suction issues. Watch trimer inlet due to plugging issues.

#5 RC / Catoxid:

Continue feeding. Watch the feed end vacumax hopper to ensure it doesn't overflow (probe has been removed).

When running, feed Hopper should not be filled past 2 feet below the top to allow room for blowdowns. HEPA filter was last changed out 6-11-16 on dayshift.

#6 RC & Dryer / D-0257:

Continue feeding.

We are not switching products. PR2 will do the screening.

A partial bag and 3 drums of material need to be refed – labeled and put on 2nd floor. We also need to refeed 5 drums of Fines (good product went through hole in screen).

Close top of bags with wire tie and place on our dock #3 trailer.

Make sure the material has aged before feeding to the dryer.

West Pfaudler / Cu-0228:

Continue running. Need to get to batch 11. **Leave bags open to air dry after unload.**

East Pfaudler / D-0257:

Continue to make batches to keep #6 fed.
We need to keep the area under the Pfaudler hopper clean.

6 Tank / D-0228 solution:

Ok to use.

7 Tank / Cleaning:

Tank has been rinsed out.

National Dryer / cleaning:

Cleaning completed, Schirmer to soda blast.

PK Blender / Catoxid:

Discharge valve was repaired on day shift. Need to walk through and run batches as manpower permits.

Need to make 4 more batches of sterotex/graphite on Tuesday for the north end. Removed the rubber discharge cloth. Need to talk with operators on how to operate the new chute. Apparently a bunch of them did not know it was modified.

Check bag house DP before starting each batch.

Flow meter is installed but not calibrated yet. DO NOT USE- trying to get it calibrated. DP Gauge should be set at 3.5 and 4.25.

Abbe Blender / :

HF tote has been closed up and Abbe lid was removed and vessel cleaned out. Cover plates over open hole in floor have been reinstalled.

Tower 3 / E 474:

Tower has been loaded but we are not starting it yet.

Tower 6 / E 474:

Continue to run.

O2 meter is out for repairs.

North Screener / ?:

Holding for engineering. Should be fixed during shutdown.

South Screener / Cu 0860:

Continue running.

If you wash down drums with water you need to dry them off – the green drums are very prone to rust.

#2662 (west) Pill Machine / AI 3915:

Running. We do not need to test the samples from the North.

#2664 (east) Pill Machine /:

Running. We do not need to test the samples from the North.

TK #2 / Zr-0404:

Done. Blowers have been turned off and kiln is down.

Leave the saggars on - we don't know what product we will be going to next.

TK #4 / 103 GP screening:

Out of feed. Need to see if we have more.

Keep feeder set at 50 and keep that area cleaned.

Harrop Kiln / Al-3920:

Continue to run. We will no longer be refeeding the oversized material. Empty the bucket into the labeled oversize drum and it will be rescreened in PR2.

Approx 3 bags ahead of kiln.

We need to stop feeding hot material to the screener by making a large pile on the top of the screener then turning it on after the material has cooled. By overloading the screener we are causing the product to not screen correctly and this putting us out of spec on this material. We must now rescreen a bunch of material we have already made. Please allow cars to come around and cool, and feed the screener only if you are able to keep the screener running.

Building 27 Belt Filter / Cu 6081:

Continue to keep running. Be sure to hand in / fill out SAP sheets.

Jeff has updated the batch sheets and we are okay to run. Jeff will provide training on the new Walk The Line requirements.

We have switched to 188 lined super sacks. These will need cardboard sleeves around them and new clean pallets.

Top 14 are important enough to keep running and staffed, top 6 cannot afford to have additional production interruptions.

- 1) #6RC/East Pfaudler
- 2) West Pfaudler
- 3) #4 RC/Trimer
- 4) #1 MED/RC/Trimer
- 5) #1 RC North
- 6) North CUAPV (to keep #1 RC North running)
- 7) North PK/Wyssmont
- 8) #2 MED/RC
- 9) #3 MED/RC/CTO
- 10) South Precip/APV (PPT is low on feed)

- 11) Horne Machine
- 12) Harrop Kiln
- 13) South PK
- 14) #5 RC (this is going to be elevated in the coming weeks if we cannot get the unit to stay running)
- 15) Reduction Towers/Screening
- 16) PR2 103 GP
- 17) Kneader
- 18) PR2 Cu-0864 T
- 19) PR2 Al-3915 T

20) Screening 103 GP TK #4 Screener
